

Point

- x
- y

SegmentPoint (Point)

- x: int
- y: int
- line: FinalPathLine

Line

- p1: Point of type T
- p2: Point of type T
- orientation: LineOrientation

PathLine (Line)

- p1: Integer Point
- p2: Integer Point
- orientation: LineOrientation
- line_breaks: List of Integer Points

FinalPathLine (Line)

- p1: Integer Point
- p2: Integer Point
- orientation: LineOrientation
- joint_type: JointType

WallLine (Line)

- p1: Integer Point
- p2: Integer Point
- orientation: LineOrientation
- wall_type: WallType
- segment_path: SegmentPath

SegmentLine (Line)

- p1: Integer Point
- p2: Integer Point
- orientation: LineOrientation
- joint_type: JointType

Path

- points: List of Points of type T

PathOrientationMixin (for subclasses of Path)

- (*) points: List of Points of type T
- orientation: PathOrientation

TypedBasePath (Path)

- points: List of Integer Points
- lines: list of Line objects of type Tline

FinalizableTypedBasePath (TypedBasePath) - Abstract Class (*)

- points: List of Integer Points
- lines: list of Line objects of type Tline

_note: this abstract class adds the finalize method to the TypedBasePath class and the *make_line* abstract method.

BasePath (FinalizableTypedBasePath, PathOrientationMixin)

- points: List of Integer Points
- lines: list of Line objects of type PathLine
- orientation: PathOrientation

FinalBasePath (FinalizableTypedBasePath, PathOrientationMixin)

- points: List of Integer Points
- lines: list of Line objects of type FinalPathLine
- orientation: PathOrientation

SegmentPath (TypedBasePath)

- points: List of Integer Points
- lines: list of Line objects of type PathLine
